

# Detach one or more instances from a Lightsail load balancer

---

*Last updated: November 29, 2017*

If you no longer want to have an instance attached to your Lightsail load balancer, you can detach it. When you detach a Lightsail instance from a load balancer, we wait until the specified instances are no longer needed before detaching.

1. On the Lightsail home page, choose **Networking**.
2. Choose the load balancer you want to manage.
3. On the **Target instances** tab, choose **Detach** next to the load balancer you want to detach.
