

Resources in Amazon Lightsail and AWS

Note

In AWS, everything you create and work with is called a resource. A virtual private server (or *instance*) is a resource, a database is a resource, and so on. In Lightsail, resources include Lightsail instances, static IP addresses, DNS zones, and instance snapshots.

Last updated: March 22, 2017

Learn more about Lightsail resources:

- [DNS zones](#)
- [Lightsail instances](#)
- [Snapshots](#)
- [Static IP addresses](#)

To work with AWS resources outside of Lightsail, you need to [peer your Amazon VPC with your Lightsail VPC](#).
